

responsible AI for Labour Market Matching

WEC-Europe

May 2021

glen cathey | svp digital strategy & innovation

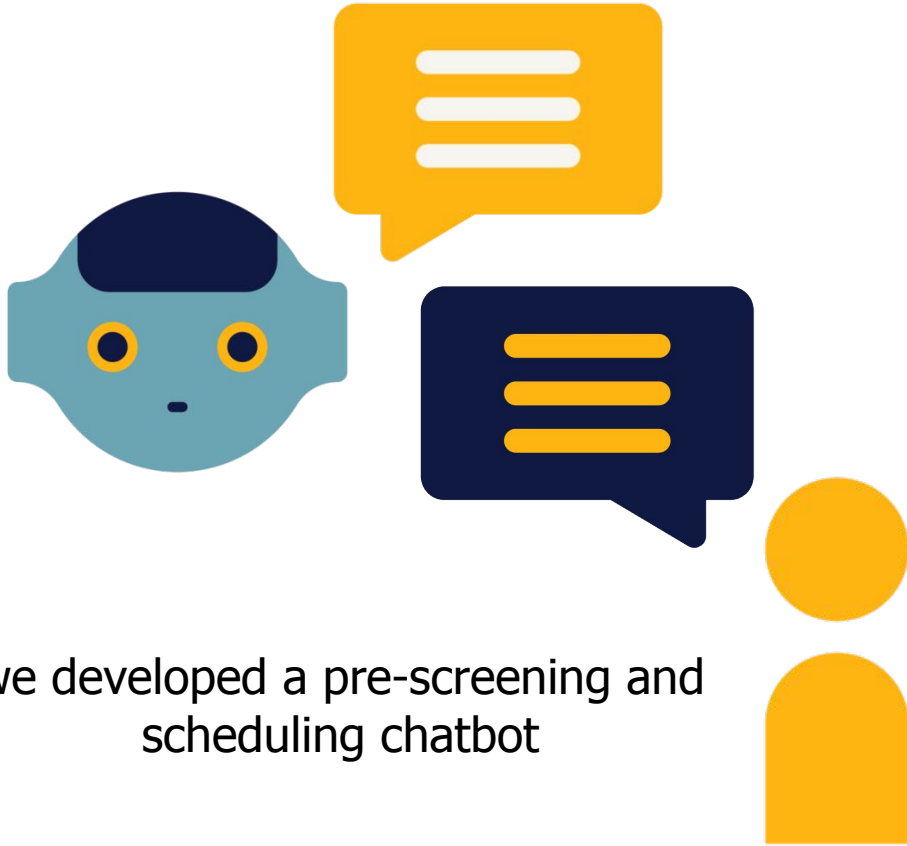

we have millions of applicants to our jobs annually

some jobs have over 200 applicants

A man in a dark blue suit and white shirt is looking down at a smartphone in his hands. He has a thoughtful expression, with his hand resting on his chin. The background is a bright, modern office with large windows and a blurred interior. The lighting is warm and soft, with a prominent orange glow on the left side of the frame.

how can we respond to 100% of applicants 24X7
and provide an excellent mobile experience?

we developed a pre-screening and scheduling chatbot

human-forward design

low friction UI

randstad chat

Continue

What shifts are you available and interested in working?

✓ 1st (9am - 5pm) + 2nd (12pm - 8pm) ✓ 3rd (5pm - 1am)

Any

Submit preference

Send a message...

This screenshot shows a chat interface for selecting work shifts. The header is 'randstad chat' with a 'Continue' button. The main question is 'What shifts are you available and interested in working?'. Below the question are three selectable options: '1st (9am - 5pm)', '2nd (12pm - 8pm)', and '3rd (5pm - 1am)'. There is also an 'Any' option. A 'Submit preference' button is at the bottom. A text input field at the very bottom contains 'Send a message...'.

multiple languages

randstad chat

from work every day?

¿Tiene transporte confiable para ir y volver del trabajo todos los días?

si

¡Excelente!

¿Está autorizado para trabajar legalmente en los Estados Unidos sin el patrocinio del empleador?

si No

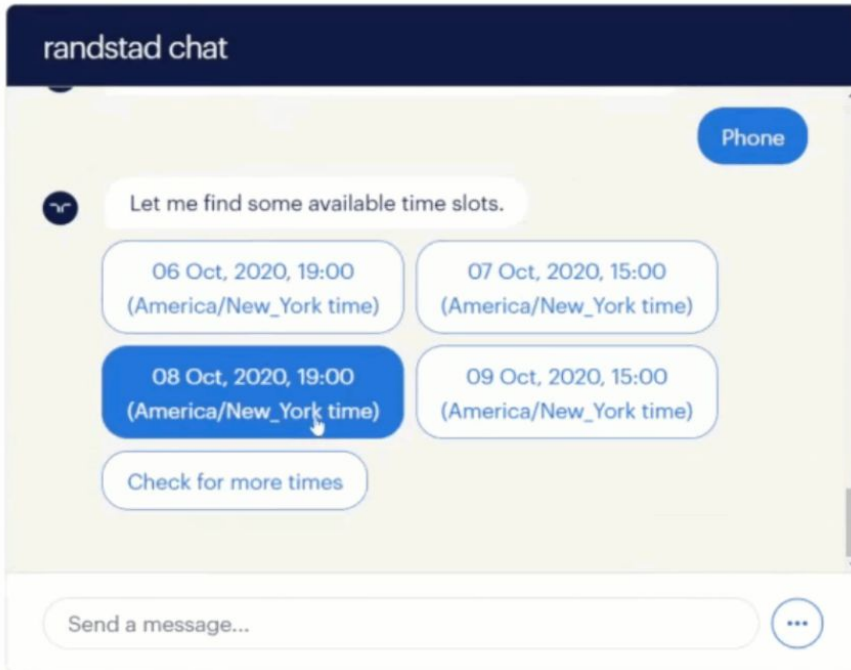

si

This screenshot shows a chat interface for a language-based question. The header is 'randstad chat'. The main question is '¿Tiene transporte confiable para ir y volver del trabajo todos los días?'. Below the question are two selectable options: 'si' and 'No'. A 'Submit preference' button is at the bottom. A text input field at the very bottom contains 'si'.

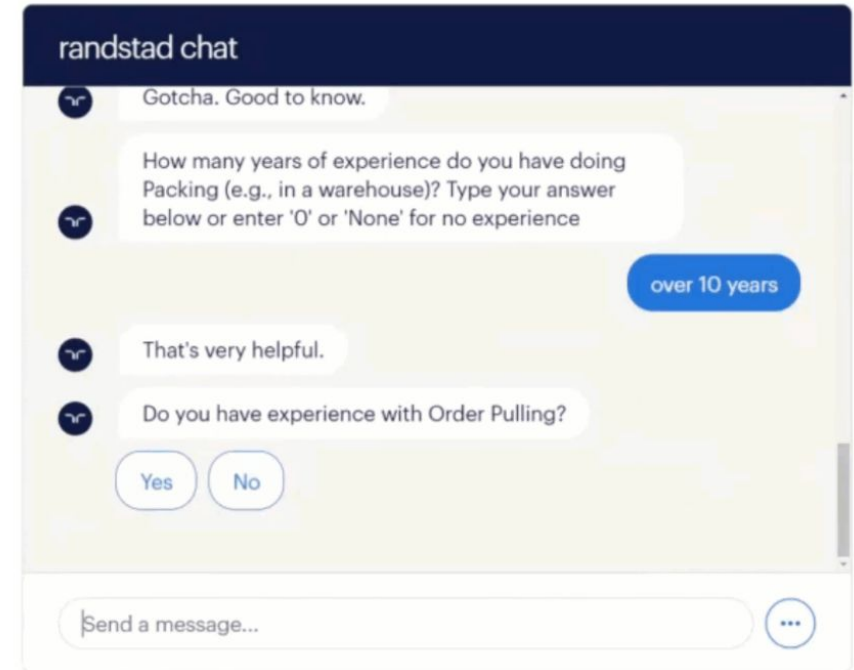

human-forward design

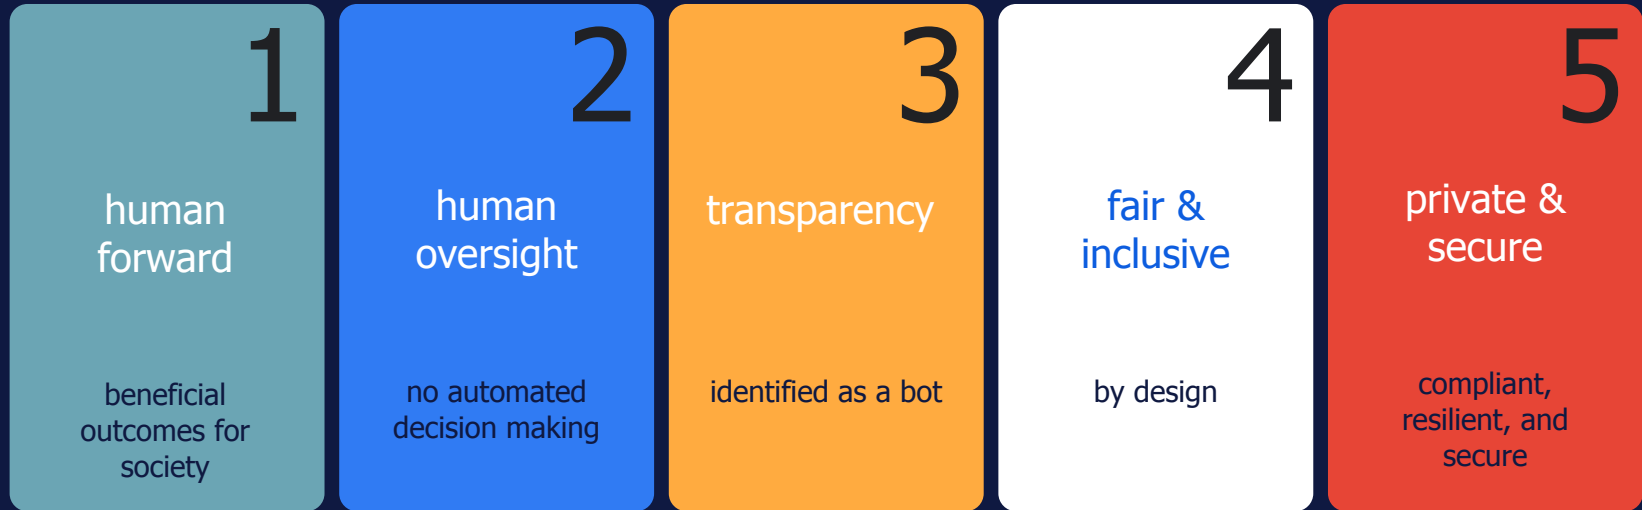

easy interview scheduling

quick reply and free text input

key solution elements

AI?

- AI is only used to reduce complex, colloquial language to structured information. “Do you know the Java programming language”? “Yeah, I have over two decades of experience, still using it” -> {experience: true, duration: 20 years, current: true}
- It’s not on autopilot. We keep detailed records of everything that is being said, how it is interpreted by the AI, and have a system in place where conversation design specialists review conversations at random and focus on those where AI was not confident about its comprehension. Hundreds of conversations are reviewed every week and every week we improve the comprehension skills to reduce chances of misinterpretation.
- Actual decisions are made without the use of AI; the decision to offer an interview or not is based only on the candidate’s meeting objective job-relevant requirements (e.g., is at least 18 years of age, holds a valid driver’s license, etc.), and those are applied uniformly across all candidates. The details of the decision making process are also logged and preserved for review/explainability.
- Note: conversations are only kept for those purposes for ~14 days after which they are purged for security reasons.

translating US implementation to EU regulation proposal

for use in the recruitment process requirements for high risk AI applicable

risk management	apply legal & security & privacy risk management process
data & data governance	apply training data unbiased, data governance model
technical documentation	have documentation in place and maintain to show compliance
record keeping	maintain logs for traceability and risk during life cycle flagged
transparency and info to users	clarify to end users that chatbot uses AI and potential implications
human oversight	conversation logs are continuously reviewed by humans to improve responses and understanding
Accuracy, robustness & cyber security	via security & privacy risk management
Automated decision making (art22 GDPR)	the system does not decide, but asks for additional information which also can be shared via other channels.
